Cold-TAG 4°C

The multifunctional label **Cold-TAG** represents an effective mean to verify the correct state of preservation of pharmaceutical products, and to control cold environments.

Cold-TAG permits to:

- monitor the effective preservation temperature below 4° C,
- evaluate the time interval by which the product has been exposed to environment with temperature > 4 °C
- insert information storage with high density, on packaging layout, by means of Nu-Code® technology. This system allows to change the content of the micro-tag on each by each basis.

Packaging exposed
to 5 °C for a lasting
period of 2 minutes
